Software Engineer

- Full-stack engineer at Amazon, building and launching vendor-facing experiences worldwide across frontend, backend, and AWS infrastructure.
- Delivered financial workspaces, remittance reporting, and search capabilities, reducing navigation steps and clicks by at least 50% for supported search workflows.
- Build integrated product experiences using React, TypeScript, GraphQL, AWS AppSync, and Lambda, with experience spanning legacy systems and VCNext modernization.

Core Skills

Programming Languages: TypeScript, JavaScript, Python, Java, C++, Rust
Frontend and Backend: React, React Native, HTML, CSS, Node.js, GraphQL, REST APIs, Distributed Systems, System Design
Cloud and Infrastructure: AWS, Lambda, AppSync, Kubernetes, Docker, Linux, CI/CD
Databases and Caching: PostgreSQL, MySQL, MongoDB, Cassandra, Redis
AI Applications: LangChain, GPT-based Workflows, AI Agents

Experience

Software Development Engineer, Amazon – Seattle, WA — 2025 – Present

Building full-stack products and infrastructure for Amazon Vendor Central's VCNext modernization.

- **Reduced navigation between vendor financial workflows** by building and launching the VCNext Finance Workspace worldwide, connecting frontend components to financial backend APIs through AWS AppSync GraphQL schemas and Lambda integrations.
- **Reduced navigation steps and clicks by at least 50%** for supported workflows by delivering the P0 search release across legacy Vendor Central and VCNext, enabling direct navigation and invoice lookup by invoice number.
- **Expanded vendors' visibility into individual remittances** by building a new remittance page and supporting API end to end, providing more detailed payment information and reporting.
- **Developing personalized navigation for vendors** by building a customer-specific most-visited-pages API, using Redis for caching and Kubernetes for deployment.

Senior Full Stack Software Engineer, Flow - Austin, TX — 2024 – 2025

Driving full-stack engineering initiatives to elevate UI/UX and backend performance for high-impact SaaS solutions.

- **Boosted user engagement:** Increased user satisfaction by 25% as measured by customer feedback by engineering React-based front-end interfaces and streamlining navigation.
- **Enhanced backend scalability:** Improved data retrieval speeds by 20% as measured by performance benchmarks by optimizing database queries, implementing Redis for caching, and deploying containerized applications using Kubernetes.
- **Optimized deployment pipelines:** Reduced deployment times by 30% through building CI/CD pipelines with GitHub Actions, ensuring consistent and high-availability updates across distributed systems.

Software Engineer Intern, BGC Partners - New York, NY — 2022 – 2022

Optimized software tools and processes to enhance operational efficiency.

- **Achieved a 25% increase in processing speed** by implementing advanced parallel programming techniques for financial data processing.
- **Automated version tracking and emails with Python**, saving 1 hour per team member per update cycle.
- **Conducted 50+ code reviews in 2 weeks**, resolving critical issues and improving code quality by 12%.

Projects

AI Marketing Agent, — 2026 – Present

Built an AI-powered marketing agent to automate social media content creation and distribution.

- Automated content generation and multi-platform publishing using AI workflows, streamlining social media marketing.
- Designed backend services to process and distribute content across channels, improving scalability and consistency.

AI Travel Agent Platform, — 2024 – 2024

Developed an AI-driven travel agent platform to simplify trip planning.

- Automated flight, hotel, and itinerary retrieval using GPT-based agents, improving planning efficiency.
- Designed a distributed backend integrating multiple APIs, ensuring reliability and fault tolerance.

Education

MS in Computer Science, Syracuse University

BS in Computer Science, Syracuse University
